

**NAKURU CITY
BUSINESS ENTERPRISE
DATABASE
2025**

Background Context

Nakuru City has continued to register steady economic and spatial growth following its conferment of city status in 2021. Strategically located along the Northern Corridor and serving as a regional commercial hub within the Rift Valley, the City hosts a diverse range of enterprises. This expansion of economic activity has contributed significantly to employment creation and local revenue generation. However, the rapid growth has also exposed gaps in the consolidation, management, and utilization of business-related data within the City administration.

The establishment of a comprehensive Business Enterprise Database for Nakuru City is therefore intended to provide a centralized and structured repository of enterprise information. Standardized industrial classification frameworks are applied to ensure uniform categorization of enterprises and to support comparability across reporting periods. The database further enhances integration with spatial planning processes through the incorporation of geolocation such as geographic coordinates and street address.

In addition, the database strengthens revenue administration by facilitating accurate tracking of licensed enterprises, identifying gaps in compliance, and supporting projections of own-source revenue. It provides a reliable evidence base for economic planning, investment promotion, and targeted support to priority sectors, including small and medium enterprises.

O	Name of the Business	Nature of the Business	Code	Sector	Address / Street	Geolocation		Number	Email Address	Hours	Status
						x_coordinate	e
